

PDF.js Integration Test

This document verifies Canvas Layer and selectable Text Layer rendering.

Recognition rather than recall.

The reader should restore this page and its zoom level after reopening.

Search and Navigation

Fitts's Law predicts the time required to reach a target.

Search should find the word target on this page.

The word target appears twice so occurrence counting can be verified.

Text Normalization Fixture

A PDF may split Human- at the end of a visual line.

Computer Interaction continues on the following line.

Later locator tests will normalize whitespace and hyphenation.

Offline Core Verification

PDF reading, search, progress, favorites, tags, and notes remain local.

AI providers are optional and cannot block the core reading workflow.

End of ScholarReader reader smoke test.
